

CaseCentral Early Case Assessment

Analyze, Assess and Reduce Prior to Review

[CaseCentral Early Case Assessment](#) (ECA) was developed specifically to provide visibility into collected and preserved data prior to expensive processing or review. Counsel can assess a case’s merits, decide whether to proceed and, if so, cull and reduce the data set before active review. CaseCentral ECA can be combined with [CaseCentral eDiscovery](#) to provide an integrated platform for ECA through Review and Production for a single matter, or combined with [CaseCentral Enterprise eDiscovery](#) for multiple matters. Managing multiple matters as a strategic business process, CaseCentral [Total Discovery Management](#) combines people, process and technology and engenders predictable costs and measurable processes which reduce time, costs and risks associated with eDiscovery.

Utilizing CaseCentral’s ECA product, customers can answer the following questions:

- Who knew what and when?
- Have all relevant custodians been identified?
- What is the estimated risk for this matter and what will Discovery cost?
- What are key terms and dates to discuss in the Meet and Confer?
- If need be, how quickly can I migrate from ECA analysis to active review?

Dynamic Concepts: Know what is in your data and act on it

Faceted Navigation: Easily identify and filter on key values

Dynamic Concepts and Faceted Navigation: Know What is in the Data and Act on it

Without searching, view and analyze major concepts and top authors, recipients and dates. Then act upon the information to assess case merits, estimate Discovery costs and reduce data volumes for early case assessment.

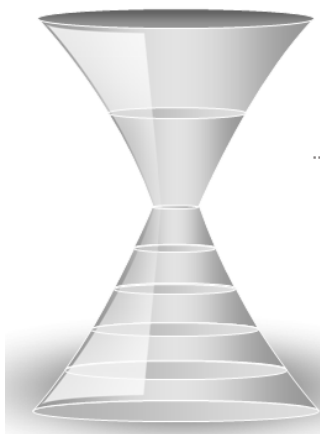

- See what is in the data through dynamic concepts, faceted navigation and powerful visual and data analytics
- Predict costs based on historical data from real matters within the multi-matter centralized legal repository for true projections in weighing whether to litigate
- Filter easily to cull or pre-tag documents prior to attorney review reducing volumes by 90% or more and accelerating attorney review
- Identify missed custodians and search terms early in the process

Perform ECA and Review in an Integrated Platform

Once relevant documents have been identified for review, data can be moved from Early Case Assessment to active review within the same software platform.

- Instantly promote data from ECA to active review
- Eliminate exports and imports to different systems to reduce wasted time and chance for errors
- Continue to apply ECA culling even after review has begun to reduce expensive attorney time

Reduce Volume and Costs Maximize Efficiency & Re-use

ECA

Allows corporations or law firms to review 100% of their data and quickly determine what ultimately needs active review

Integrated Platform

Migrate to CaseCentral eDiscovery or CaseCentral Enterprise eDiscovery for review of one case, or as a repeatable process for many cases.

Post Review Utilization

Utilize the work product to guide your litigation hold or preservation strategy for further ECA or case management

Gain Visibility via the Enterprise eDiscovery Dashboard with Process Analytics

The Enterprise eDiscovery Dashboard with process analytics takes advantage of the centralized legal repository to provide business intelligence necessary for early case assessment, forecasting and controlling eDiscovery costs.

- Perform cost assessments based on real historical data
- Monitor status across all cases to never miss a deadline
- Measure review rates and quality in real-time

Collaborate Securely through CaseCentral's Private Cloud Delivery Model

Leverage [CaseCentral's private cloud](#), SaaS delivery model for increased savings and better security.

- Always know where your data is (as opposed to being on third party drives)
- Pay for only what you need
- Scale to terabytes on-demand, and ramp down just as quickly
- No software or hardware requirements
- World class security including enterprise class disaster recovery and business continuity planning (BCP)

Rest Easy Knowing ESI was Defensibly Processed

Delivered ESI is across hundreds of file types.

- Defensible chain of custody
- Advanced de-duplication reduces data up to 90%
- Identify near-duplicates and email threads
- Receive exception and inventory reports

Technical Requirements

Because CaseCentral is cloud-based software, users only need an Internet connection and Internet Explorer 7.0 or greater to access the system. For optimal performance, processors should be P4 1GHz or greater.
